## Fitting the device

The easiest way to fit the 104 is to attach it to the metal surface underneath the vehicle that you wish to track. The tracker features a magnetic base for easy mounting. While installing, always make sure the surface you are attaching to is clean, flat and away from any sources of heat. Care should be taken to make sure the tracker is not positioned in an area where the tracker could be knocked off or damaged by moving parts.

The waterproof pouch provided with the tracker should always be used. The pouch should be checked before each use to ensure it is closed tightly and is not damaged in anyway. If damaged, the pouch should be replaced immediately to avoid invalidating the trackers warranty.

If you have just activated the tracker it can take up to 10 minutes to establish an initial GPS fix. A short journey will allow the tracker to establish a GPS satellite fix quicker.
